ABOUT NOMAD

Nomad is a suite of web-based applications and services deployed on premises or on the cloud with support offered for hosting, configuration, maintenance, and patching.

Built with security and compliance in mind, Nomad follows NCSC guidance and a secure-by-design approach, backed by an experienced team skilled in maintaining confidentiality, integrity, and availability.

Key security controls are integrated to reduce the attack surface and ensure secure communications. Access can be direct or routed through specialised Nomad obfuscation nodes, which mask client-to-client and client-to-server interactions for enhanced privacy.

GLOBAL COVERAGE

- Microsoft Azure
- Amazon Web Services
- Google Cloud

IMR
IP Mobile Radio

Secure, real-time communication for teams

NOMAD

IMR
IP Mobile Radio

Advanced, secure, connected

IP Mobile Radio (IMR) offers advanced, secure communication tools to boost situational awareness with encrypted voice channels, chat groups, and live location sharing – keeping your team connected and informed.
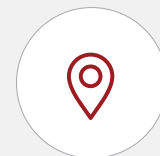

KEY BENEFITS

INTEGRATION
The Nomad IMR Android app integrates with other applications and devices, while the Windows app scales up to support single users or multi-operation leaders. Nomad IMR provides seamless, private communication that's adaptable to any team's needs.

SECURITY
Nomad IMR prioritises security, building systems with confidentiality, integrity, and availability at their core.

The software uses modern encryption standards and industry-grade security tools to ensure robust protection and ongoing vulnerability assessment throughout the service life-cycle.

SUPPORT
Our standard support includes patching, maintenance, and access via phone, email, and documentation. Custom support packages and additional services, such as training, are also available.

PUSH-TO-TALK (PTT)
Physical and on-screen PTT options simulate a traditional radio experience including tones.

MULTIPLE VOIP CHANNELS
Create and switch between channels in real-time for flexible group communication.

LOCATION SHARING
Optional Live tracking with online/offline mapping and marking positions of interest.

INSTANT MESSAGING
Group or private text chat with persistent notifications for silent communication.

FILE SHARING
Instantly send photos, images, or files to team members.

SECURE AND PRIVATE
End-to-end encryption ensures only clients access data.
